

Organization Profile Sample

Disclaimer: The organizational profile provided here is a fictional creation intended solely for the purpose of illustrating how an NGO's organizational profile could be crafted.

Organization Name: Harium International

Organization Age: Founded in 1990

Registration Status: Registered Non-Governmental Organization (NGO)

Organization Type: Conservation-focused NGO

Specialty Area: Tiger Conservation and Human-Wildlife Conflict Resolution

Harium International, established in 1990 with a humble five-member team in Indonesia, has evolved into a vibrant family of approximately 120 dedicated professionals. Our team encompasses a rich diversity of expertise, including conservation biologists, scientists, sociologists, wildlife veterinarians, managers, lawyers, finance experts, and communication specialists.

At Harium International, our primary focus lies in the protection and conservation of the majestic tiger, a keystone species that plays a vital role in maintaining the ecological balance of our forests. We are deeply committed to addressing the complex challenges faced by tigers in India, ranging from human-tiger conflict to habitat loss and poaching.

Key Areas of Work

- 1. Human-Tiger Conflict Resolution:** We collaborate closely with forest departments to rescue tigers from conflict situations, ensuring both the safety of human populations and the well-being of these magnificent creatures.
- 2. Tiger Conservation Awareness:** Our efforts extend beyond the field, as we work tirelessly to raise awareness about the critical importance of tiger conservation. Through engaging outreach campaigns, we educate communities and the public about the significance of coexisting with these apex predators.

3. **Habitat Restoration and Protection:** Harium International actively participates in habitat restoration projects, focusing on safeguarding the landscapes that serve as vital tiger habitats. We engage in reforestation initiatives and advocate for policies that protect these crucial areas.
4. **Wildlife Research and Advocacy:** Our team of scientists and researchers conducts groundbreaking studies to better understand tiger behavior, ecology, and population dynamics. The insights gained from our research inform evidence-based conservation strategies and policies.

Key Personnel

- **Director:** Dr. Salmet Herman, Sh@HariumInternational.org
- **Board Chair:** Sri Wahyuni Ismail, SWI@@HariumInternational.org

Employees: 120+ professionals dedicated to tiger conservation and environmental sustainability.

Beneficiaries: Our initiatives have positively impacted the lives of thousands of individuals residing in tiger habitat areas, fostering coexistence and reducing human-wildlife conflicts.

Partners

We collaborate with a range of partners, including government agencies, international conservation organizations, local communities, and corporate entities that share our commitment to tiger conservation. Together, we amplify our impact and create a united front for safeguarding these magnificent creatures and their habitats.

Successful Donor-Funded Projects

"Project Big Teeth" In one of our notable projects, "Project Big Teeth," funded by Global Fund. We worked closely with local communities living near a critical tiger habitat. By involving these communities in conservation efforts, we transformed them from potential threats to passionate advocates for tiger protection. Through innovative educational programs, sustainable livelihood initiatives, and community-based patrols, we successfully reduced incidents of human-tiger conflict while fostering a sense of ownership and responsibility among the people. By partnering with local communities

and empowering them to actively engage in habitat protection, we created a sense of ownership and stewardship, ensuring the long-term sustainability of the initiative.

Tiger Habitat Restoration Initiative: Partnered with reforestation experts to restore critical tiger habitats, leading to the revival of degraded landscapes and increased tiger populations. This project was co-funded by the Government of Indonesia and the World Wildlife Fund (WWF). Over the course of five years, the Tiger Habitat Restoration Initiative successfully restored and protected over 10,000 hectares of critical tiger habitats. The initiative contributed to a remarkable increase in the tiger population, with a reported 30% rise in the number of tigers within the restored habitats.
