Light For Peace Project

The global refugee crisis has led to an increasing number of displaced individuals residing in temporary camps and settlements, often with limited or no access to reliable energy sources.

This lack of access to energy exacerbates existing challenges faced by refugees, negatively impacting their health, safety, and socioeconomic opportunities, and hindering sustainable development in their host communities.

Project Aim

Light for Peace is a humanitarian initiative that provides clean and sustainable energy solutions to refugees in temporary camps and settlements across Nigeria. By offering access to renewable energy sources, the project aims to improve displaced individuals' living conditions and well-being while mitigating the adverse impacts of climate change and reducing health hazards associated with traditional energy sources.

Light for Peace aspires to empower refugees, promote social cohesion, and contribute to sustainable development within Nigeria's host communities through collaboration with Nigerian stakeholders and international partners.

Impact Summary

01

Two camps impacted

02

Two charging stations installed

03

Seven street lights installed

295

FAMILIES

LightEd Kids Project

CLEAN ENERGY PROVISION

The LightEd Kids project educates children in urban areas about renewable energy and climate change. We then give them the tools they need to enlighten children in rural areas while also giving them access to reading and touch lamps so they can study at night instead of using kerosene and candles, which they currently use.

YOUNG CLIMATE INNOVATORS

We want to encourage more children to become leaders in green energy and social change who can address local and global energy issues.

Problem Statement

The current lighting solution used in Nigeria is kerosene lamps. Kerosene lamps are incredibly harmful to health — inhaling kerosene smoke is equivalent to 40 cigarettes daily. This causes families lung cancer, eye problems, and many other health issues. For students, studying at night means killing themselves by using kerosene lamps. Otherwise, they must go without education past daylight.

Impact Summary

We currently have 150 students who have been trained, and they have provided 750 lamps to children in various communities.

Vision & Mission

Our Goal is to provide 30,000 Refugees & school kids access to clean energy solutions by 2030, empowering a future where everyone has equal access to clean and affordable energy.

**CLEAN AND
AFFORDABLE ENERGY**

**ACCESSIBLE AND
PEOPLE CENTERED
DESIGNS**

**CREATING NO MORE
DARK ROOMS**

Our mission at LightEd is to provide people access to clean energy. To that end, we have developed The Light For Peace and LightEd Kids Project. These two impact initiatives will and already have helped target groups who cannot afford access to clean energy obtain solutions.

**STAY
LIGHTED**
